

## INSTALACJE 2006

### *Live construction of a house at the trade show*

BudShow, an active "live" demonstration of materials, equipment and technologies, has been organized with individual investors in mind. This year it focuses on energy efficiency. This year BudShow, an event already known to BUDMA trade fair participants, this year includes installation companies and is held during the INSTALACJE trade fair.

The scenario of BudShow 2006 includes daily presentations of a model house in Pavilion 4. This is the venue for the model house divided into three areas: Energy-efficient house, House under construction, Ready-made house.

The project is to present energy-efficient construction materials, devices and technologies that lead to the greatest energy savings for inhabitants of the house. Education as regards construction methods will be an important part of the show. If the house is well-insulated and how much energy will be used to heat it depends on the correct construction and installation works.

#### BudShow 2006 participants:

- |                     |             |                 |                         |
|---------------------|-------------|-----------------|-------------------------|
| - Alpol,            | - Danfoss,  | - Legrand,      | - Solbet,               |
| - Blach-Dek,        | - Fakro,    | - Rintal,       | - Stolbud Włoszczowa,   |
| - Braas,            | - Grundfos, | - Rockwool,     | - Viessmann,            |
| - Ceramika Paradyż, | - Hörmann,  | - RuppCeramika, | - Wavin Metalplast-Buk. |

The model house will be constructed from materials provided by the above listed producers. Individual technological stages of the construction will be completed by authorised contractors of these companies.

Archtim architectural studio is the author of the construction design of the house.

BudShow 2006 press partners: "Murator" and "Logistyka a jakość".
